# 3 burning questions you raised most:

Which Copilot is which?
What happens to your data? How far you can trust it?

01

# The 3 different types of Copilot licenses

HITACHI

### Free Copilot

This is the Copilot people see today in Teams, Word, PowerPoint, Outlook or on the web. Microsoft is actively pushing it everywhere, so many users have access even without realizing it.

It **doesn't see your emails, meetings or files.**

### Copilot M365

This is the enterprise license provided by the company. It's embedded across Microsoft 365 and works inside the organization's secure environment.

**It understands context**: your meetings, emails, chats, documents, calendars and SharePoint content, always respecting access rights.

### Copilot Studio

It is the tool used to create, customize, and extend Copilots. It's not for everyday usage, but for teams who want Copilot to reflect specific processes or knowledge.

You can use it for: **building internal Copilots** for HR, IT, finance, onboarding, support, or communities. Connecting Copilot to internal data sources, workflows, and business rules.

©Hitachi Solutions Europe, Ltd. All rights reserved.

# Where to find Copilot?

HITACHI

Copilot can be accessed in a few places

**Desktop /Browser application**

Search for ‘Copilot’ or ‘M365 Copilot’ on your devices search bar.

**Microsoft Edge web browser feature**

The Copilot web browser feature integrates AI capabilities directly into your browsing experience

**Microsoft Office apps extension**

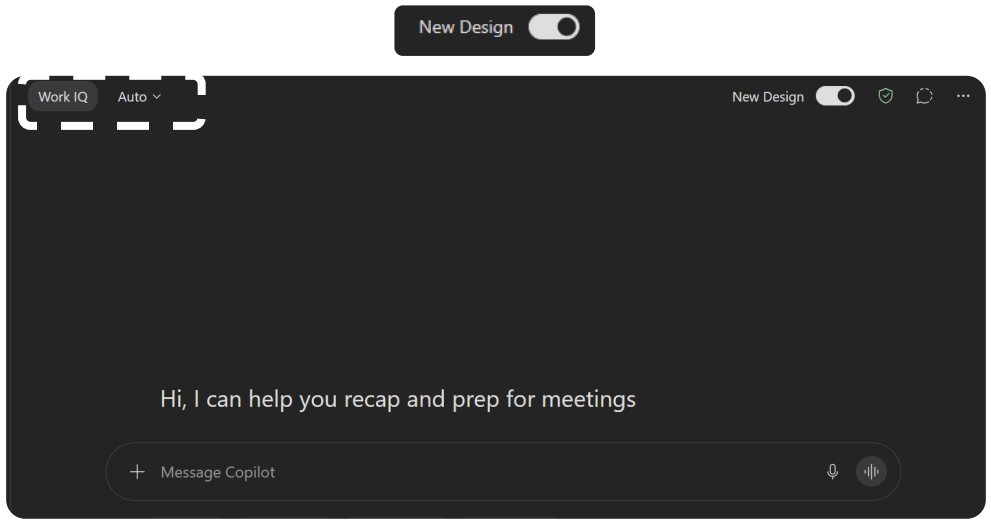

Microsoft Copilot is integrated into several Microsoft 365 applications to enhance productivity and streamline tasks

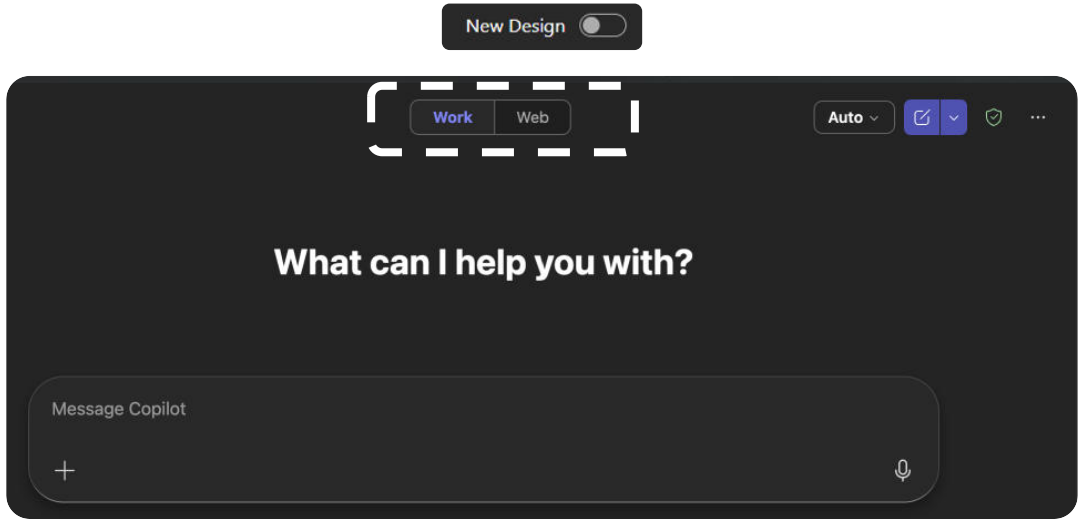

©Hitachi Solutions, Ltd. 2026. All rights reserved.

# What Copilot version are you using? Let’s find out!

HITACHI

**or**

**Work/Work IQ vs Web = two different brains**

**Work mode** uses internal documents:

- Grounded in your organisation's content
- Pulls from your files, emails, chats and meetings
- Answers stay inside your tenant. Data stays protected
- Turn it on for anything work-related. This is the default

**Web mode** uses internet data:

- General, public web knowledge only
- No grounding to your organisation's content
- Fine for general questions and quick lookups
- Don't paste confidential Hitachi Rail material here

# A few myths vs reality about Copilot

HITACHI

## Is it safe?

**MYTH**

It’s risky and works like public AI tools.

**REALITY**

Copilot runs in your secure environment and follows university policies. The risk comes from what you paste and what you send without reviewing.

## Is it reliable?

**MYTH**

It knows everything and is always right.

**REALITY**

It only sees what you can access, and can sound confident yet be wrong, so verify.

## Is it for me?

**MYTH**

It’s only for tech experts with perfect prompts.

**REALITY**

Most value comes from simple daily tasks; clear intent beats clever wording.

**Copilot amplifies your thinking — it doesn’t replace it.**

# Why Copilot sometimes surprises you

HITACHI

## How Copilot uses data

### Inherits your data quality

Work Copilot reflects the state of your internal documentation.
Outdated, duplicated or fragmented files lead to weaker outputs.

### Surfaces permission gaps

Wrong access settings can let it reveal restricted documents.

## How Copilot thinks

### Hallucinations happen when data is unclear or missing

They’re not a bug, they’re a sign of weak inputs or ambiguous prompts.

### Won’t push back unless asked

It tends to agree; tell it to challenge or stress-test your ideas.

## Why results vary

### Adapts to each app

It already knows the app you’re in (e.g. Teams, Word, Outlook) – prompt for the missing piece.

### Strongest in key languages

English leads, then French, German, Spanish, Italian, Japanese, Portuguese.

©Hitachi Solutions, Ltd. 2026. All rights reserved.

# Every prompt has a footprint. How do we make it worthwhile?

HITACHI

Responsible prompting is not about avoiding AI. It is about using the right level of AI for the research value required.

## THE CHALLENGE

### AI use consumes energy and water.

There is no single footprint for a prompt. Impact varies by model, task, input, output and underlying infrastructure.

## THE QUESTION

### Is this the right use of AI?

Am I using an appropriate tool and asking for the research value I actually need?

## THE THINKING

### Make every interaction purposeful

- Avoid unnecessary AI use
- Reduce repetition and excessive outputs
- Verify the research value produced
- Record significant AI use where relevant
- Follow university, ethics and disclosure requirements

**Responsible prompting means achieving the required research value with the minimum appropriate computation.**

©Hitachi Solutions Europe, Ltd. All rights reserved.

# Using Copilot with research material

HITACHI

**Paula**
PhD researcher

Paula is preparing for a supervisor meeting. She has two open-access papers she may share and her own non-sensitive research notes.

**She asks Copilot to:**

- “Summarise this paper’s methods and findings in 5 bullets.”
- “Compare the methods in these two papers. Cite the relevant sections.”
- “List the limitations the authors report. Flag any missing information.”
- “Draft a supervisor update using only my progress notes.”

**Checks before sharing**

- Use your university-approved Copilot account
- Share only material your university permits
- Check consent, ethics and confidentiality requirements

©Hitachi Solutions, Ltd. 2026. All rights reserved.

# Responsible use of Copilot in research

HITACHI

**Paula**
PhD researcher

**Paula now wants to work with participant interviews.** Check permissions and ethics approval before sharing any data.

## Research guardrails

- Keep identifiable participant data out unless explicitly approved
- Verify every reference and claim against its source
- Keep ownership of your analysis and conclusions

## Prompts to avoid

**Keep the task within the approved purpose.**

- Avoid: “Identify the participants from these interview details.”
- Avoid: “Invent references to support my hypothesis.”

**You remain accountable for your research.** Check outputs and follow university and publisher AI disclosure rules.

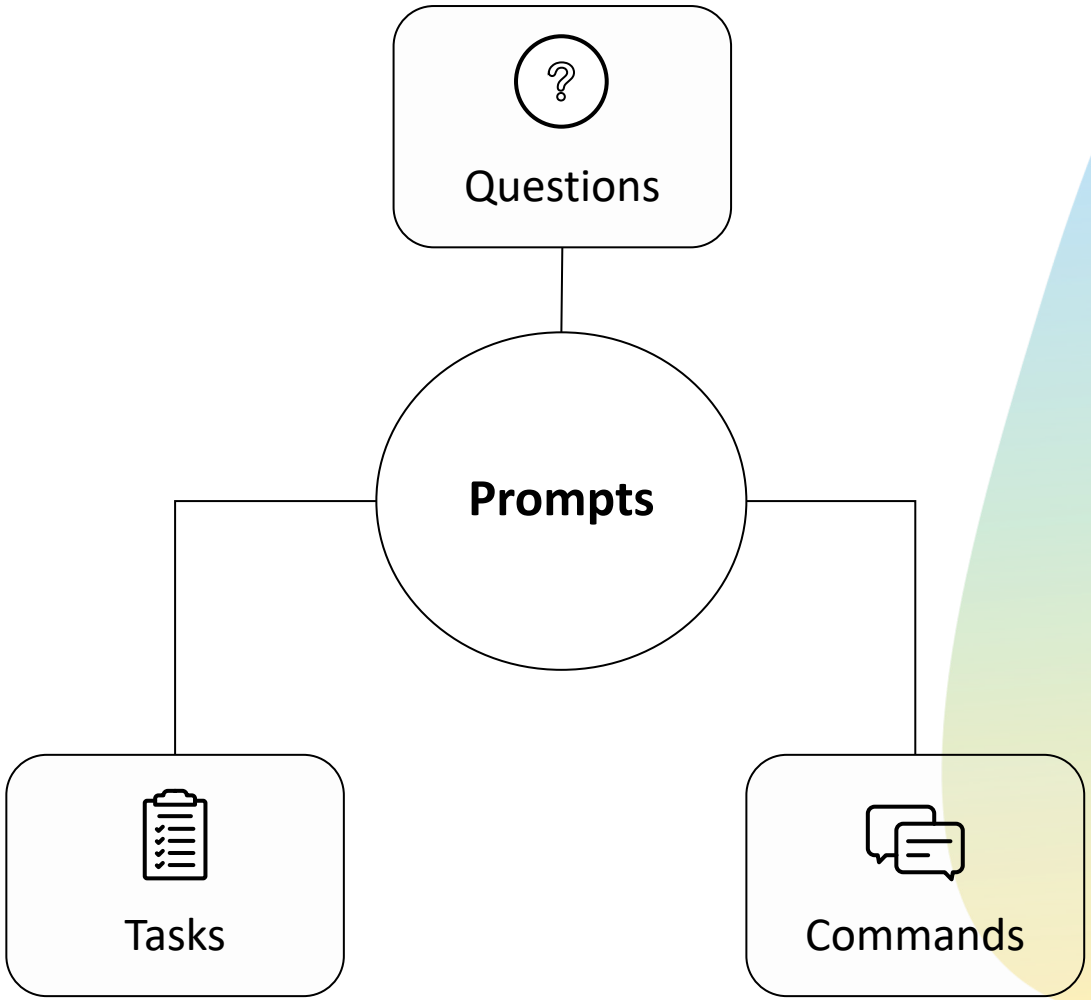

©Hitachi Solutions, Ltd. 2026. All rights reserved.

# Effective prompting

03

# What is a prompt?

**A prompt is a clear instruction or question you give to Copilot to guide its response.**

It can be:

- A **task** (e.g., “Summarise this report”)
- A **question** (e.g., “What are the key trends in this data?”)
- A **command** (e.g., “Draft an email to the team”)

Think of a prompt as how you “talk” to Copilot to get the help you need - just like giving directions to a helpful assistant.

# Include the right prompt ingredients

HITACHI

**Goal**

What response do you want?

**Context**

Why?

**Source**

Where can you find everything you need?

**Expectations**

How to respond to best meet your expectations

I am at the early stage of developing a postgraduate research project. Help me turn my broad interest in how generative AI is changing the way university students learn into a small number of credible research directions that I could investigate. I am interested in the relationship between generative AI, student learning behaviours and independent learning in higher education. I haven't yet decided on a precise research question, methodology or theoretical framework. I want to explore the topic before narrowing it down, rather than jumping immediately to a finished research question. Treat me as the researcher. Your role is to help me explore and challenge my thinking, not to make the research decisions for me. For this initial exploration, use the information I have provided above and your general knowledge to help me map the topic. Clearly distinguish between, 1. ideas or hypotheses that need testing, 2. established concepts or bodies of research that may be relevant, & 3. claims for which I should seek supporting academic evidence. Do not invent citations or references. Where literature would be useful, suggest search concepts and keywords I could investigate through my university's academic databases rather than presenting unverified references as evidence. Structure your response in five parts: 1. Identify 5 possible research directions within this broad topic.2. For each, explain why it could be interesting to investigate and what remains uncertain. 3. Suggest 2 possible research questions for each direction. 4. Identify useful keywords and search terms that could help me begin exploring the academic literature. 5. Finish by asking me 5 challenging questions, one at a time, to help me decide which direction best fits my interests, research context and intended contribution. Do not select the “best” topic for me. Help me make that judgement myself.

# Remember this formula

HITACHI

**Act as a [Context].**
**Help me [Goal].**
**Use [Source].**
**Give me the result as [Expectations].**

**Simple tip:** Ask Copilot to remind you of this formula when prompting!

*"Remember that whenever my prompt is vague, remind me to use the GCSE framework: Goal, Context, Sources, Expectations.."*

©Hitachi Solutions Europe, Ltd. All rights reserved.

# Keep iterating

HITACHI

**Good**

Help me prepare for a Conversation about Generative AI by creating a list of the latest academic thesis focused on research steps.

**Better**

I'm am a postgrad researcher having conversations with a group of postgraduate research peers, about Generative AI, please list the latest academic thesis focused on Gen AI in research, the steps it aids and explain why we should be discussing the use of AI in research, I want to enable the team to focus on key topics and make informed decisions in the meeting.

**Best**

I'm am a postgrad researcher having conversations with a group of postgraduate research peers, about Generative AI. Please review the attached thesis [file] discussed , recent correspondence and the previous meeting with my peers [notes, transcripts, emails] and give me a summary of the most important points, risks and why they should be discussed further, so that we can identify the key topics of discussion for the team to highlight in the meeting.

# Ask yourself these questions when prompting

HITACHI

Use Copilot across your entire workflow

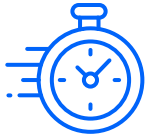

### Why am I using this prompt?

What is the context for the ask?

### What will I do with the output of the prompt?

Am I going to send it onto someone else? Does it need to be in a different format?

### Can I extend Copilot's remit to save more time?

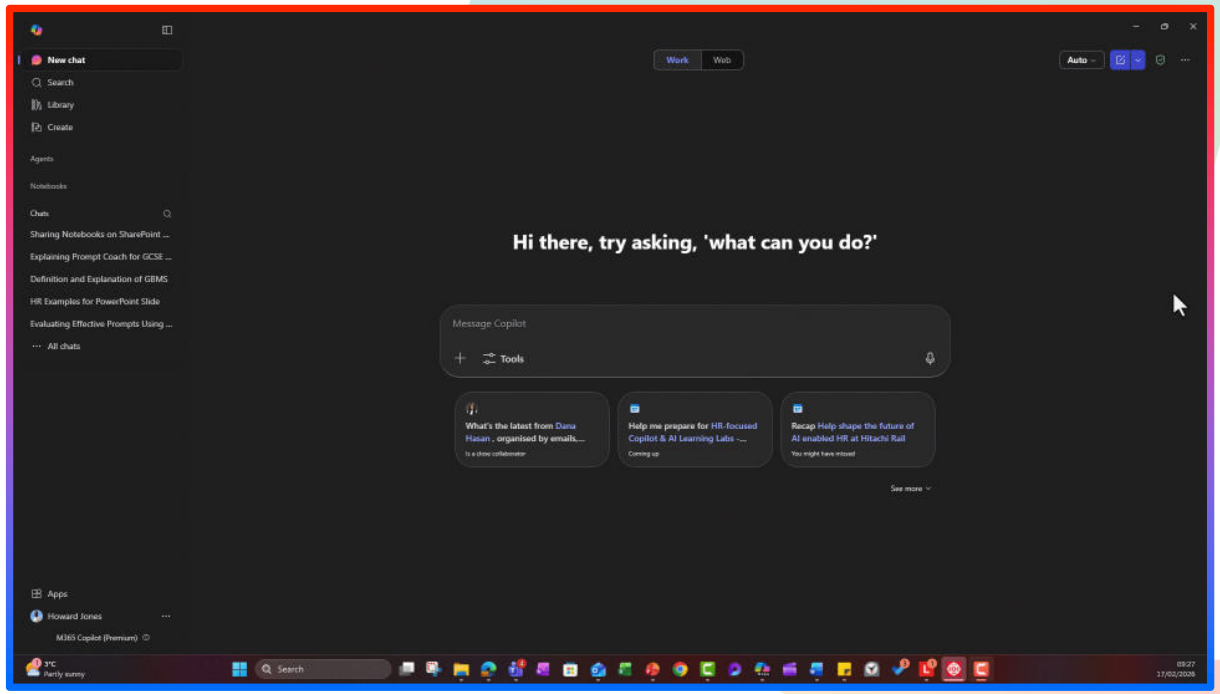

Can I ask Copilot to do a bigger task to automate more work?

©Hitachi Solutions Europe, Ltd. All rights reserved.

# Use the Prompt Coach agent

Prompt Coach functions as a mentor within the workflow – it doesn't provide direct solutions but guides you to enhance your communication and documentation by applying the structured G-C-S-E type model commonly.
